

DAQ-9600 Specifications

The specifications apply when the DAQ-9600 is powered on for at least 60 minutes.

(with optional GPIB)

Note :

- All specifications are ensured only under a single display.
- At least 1 hour of warm-up time is required before applying these specifications.
- MAX DC600V, AC 400V

Display	4.3" color WQVGA (480x272) with LED backlight						
Interface	RS -232C, USB host/device, LAN, Digital I/O; GPIB(optional)						
Power Source	AC 100 V / 120 V / 220 V / 240 V ±10%						
Power Line Frequency	50 Hz / 60 Hz ±10%						
Power Consumption	Max. 50VA						
Dimensions	220(W) x 88(H) x 348.6(D) mm ~ without bumper 266.9(W) x 107(H) x 357.8(D) mm ~ with bumper						
Weight	Approx. 4.5kg						

- [1]. DC Specification: In addition to the availability that requires warm-up of 60 minutes, it must be set in 5/s speed rate, A-Zero on.
- [2]. The entire range of measurement will pass the set range by 20% except the tests of 600 V DC, 400 V AC, 2 A DC, 2 A AC and diode.
- [3]. This specifications applies to 4-wire ohms function or 2-wire ohms using math null for offset. Without math null, add 2 Ω additional error in 2-wire ohms function. The 100M and 1G ohm ranges are 2-wire only.
- [4]. This specification applies to the voltage measured from input terminal. 1 mA test current is the typical value. The change of current source leads to the variation in buck of diode junction.
- [5]. AC Specification: It will be available after 60 minutes of warm-up, sine wave as well as 1/s speed rate.
- [6]. Specifications are for sinewave input >5% of range. For inputs from 1% to 5% of range and <50 kHz, add 0.1% of range additional error. For 50 kHz to 100 kHz, add 0.13% of range. The measurement range of 400 VAC is limited within the range of 7.5×10^7 Volt-Hz.
- [7]. Three speed settings provided for low-frequency performance: 1/s (3 Hz), 5/s (20 Hz), 20/s (200 Hz). Additional errors will Not occur for the frequency greater than the filter settings.
- [8]. Specifications are for sinewave input >5% of range, and is beyond 10 μ A AC. For inputs from 1% to 5% of range, add 0.1% of range additional error.
- [9]. This specification will be available after 60 minutes of warm-up and sine wave input, unless stated otherwise. This specification applies to 1s gate time.
- [10]. This specification is available when both sine wave and square wave input ≥ 100 mV. For the input of 10 mV to 100 mV, the % of reading error needs to be multiplied by 10 times.
- [11]. The amplitude range is from 10% to 120% and is lower than 400 VAC.
- [12]. The input ≥ 60 mV, for 300 k \sim 1 MHz, within 100mV range.
- [13]. The actual measurement range and test lead error will be constrained by the adopted test lead. The test lead accuracy adder covers all errors of measurements and ITS-90 temperature change.
- [14]. Specifications are for film Capacitance inputs that are greater than 10% range. range.
